

Test Case	Issues	Resolutions
R6T1	[PROGRAM] Logging out while already logged out rewrote the transaction summary	Moved process() and stackPush() into the try statement
	[PROGRAM] Same as above	[SOLVED] Removed "logged out" state and moved logout logic directly to the logout transaction
R6T2	[TEST CASE] Minor discrepancy in expected output vs. actual output	[SOLVED] Changed expected output from "Cannot create account before login" to "Cannot create account while logged out"
R6T5	[TEST CASE] Minor discrepancy in expected output vs. actual output	[SOLVED] Changed expected output from "Cannot create deposit while logged out" to "Cannot withdraw while logged out"
R6T8	[TEST CASE] Output file should have been set to the empty file as no new transactions have taken place since relogging	[SOLVED] Changed expected output to empty.txt
R7T1	[TEST CASE] Forgot to add last part of expected output	[SOLVED] Added last part to expected input
R7T2	[PROGRAM] The output from the program when creating account displayed "Delete Account selected..."	[SOLVED] Changed output when choosing create account to "Create account selected..."
R8T3	[PROGRAM] Actual output does not match expected output	[SOLVED] Updated actual output to match expected output
R8T5	[PROGRAM] Actual output does not match expected output	[SOLVED] Updated actual output to match expected output
R9T2	[PROGRAM] Actual output was missing a period	[SOLVED] Added period to the end of actual output
R11T2	[TEST CASE] Expected input was entered incorrectly	[SOLVED] Corrected expected output
R15T1	[PROGRAM] Minor discrepancy in expected output vs. actual output	[SOLVED] Corrected actual output
	[PROGRAM] Transaction being recorded as withdraw rather than deposit	[SOLVED] Corrected transaction code from WDR to DEP
R15T5	[PROGRAM] Program allows the user to deposit more than allowable session amount	[SOLVED] Modified the checkValidAmount() function to handle different types transactions. It was originally setup to handle just transactions.
R18T1	[PROGRAM] Command "—exit" is actually causing program with withdraw -1 cents from an account which is not allowed	[SOLVED] amount was reporting the exit code (which is -1) and instead of dealing with it, it was using it as the amount. Added proper exit code checking when getting amount.
